

## PLGA Electrospinning Microspheres

Cat. No. BIOD-001

Lot. No. (See product label)

<b>Product Name</b>	PLGA Electrospinning Microspheres
<b>Common Name</b>	PLGA Electrospinning Microspheres
<b>Synonyms</b>	PLGA Electrospinning Microspheres
<b>Product overview</b>	This product is a nanofiber microsphere prepared by combining biodegradable polymer materials and micro-nano processing technologies such as electrospinning. Combines the functional advantages of nanofibers and microspheres. The product has high porosity, high specific surface area and good mechanical properties.
<b>Morphology &amp; Appearance</b>	Fibrous porous microspheres
<b>Size</b>	Average Particle Size: 100-300um
<b>Storage</b>	Store at 4°C.
<b>Application</b>	The microsphere product can simulate the nanofibrous structure of natural extracellular matrix, promote the interaction between cells and matrix, and then promote cell adhesion, proliferation and differentiation. Widely used in cell culture, drug controlled release, tissue engineering and other fields.
