

## High Surface Area Supercapacitor activated carbon powder

Cat. No. BMLC-KJ051

Lot. No. (See product label)

<b>Cat.No</b>	BMLC-KJ051
<b>Product Name</b>	High Surface Area Supercapacitor activated carbon powder
<b>Common Name</b>	High Surface Area Supercapacitor activated carbon powder
<b>Synonyms</b>	High Surface Area Supercapacitor activated carbon powder
<b>Description</b>	This supercapacitor activated carbon has the characteristics of high specific surface area, high conductivity, low ash content, excellent pore size and particle size distribution, high electrostatic capacity, small leakage current and self-discharge, and high current charge and discharge. It is mainly used in button type, winding type, stacked type, box type EDLC and supercapacitors.
<b>Product overview</b>	Specific capacitance: 28 F/g Surface Area: 1980m <sup>2</sup> /g
<b>Size</b>	D50: 4.49µm
<b>Storage</b>	Store at room temperature
