

Trans-hi DNA transfection reagent

Cat. No. LNP-206

Lot. No. (See product label)

Product Name	Trans-hi DNA transfection reagent
Alias	Polymer-lipid complex transfection reagent
Size	10 mg; 20 mg; 50 mg
Appearance	Colorless transparent to slightly opalescent viscous liquid
Solubility	It can be mixed with aqueous buffer in proportion to form stable complexes
Description	Trans-Hi DNA transfection reagent is a polymer-lipid hybrid formulation designed for high-efficiency DNA delivery with serum tolerance and low cytotoxicity. It forms stable nanocomplexes with DNA through electrostatic interactions and maintains transfection activity even in serum-containing media. Suitable for gene expression studies in diverse cell types including difficult-to-transfect primary and stem cells.
Applications	High-level transient protein expression and gene function analysis
Storage	4°C, protected from light
Purity	95%+
Shelf Life	1 Year
Shipping Condition	Low temperature transport
